

PRESSURE WASHING SUPPLIES FOR STORM WATER COMPLIANCE

Review the pressure washing wash water disposal guidance on the Property Maintenance website (stormwaterpmtoolkit.com) to understand the requirements for your pressure washing activities.

This handout lists the types of products needed for wash water disposal. Other product types may be used to prevent contaminated water, sediment, and debris from entering the City storm water system.

| PRODUCT TYPES | DESCRIPTION/FUNCTION | USED FOR | EXAMPLES |
|---------------------------|--|---|--|
| Berms/Barriers | Damming systems which facilitate the collection of wash water and prevent pollutants from flowing into the street/City storm drain system. | <ul style="list-style-type: none">- Heavily-soiled pedestrian areas- Vehicle use areas- Trash enclosures- Building exteriors when wash water is not odorless and colorless | Berms (Hydrotek Water Containment Berm*) Sand-filled bags (Ultragravel Bags*) |
| Filtration Devices | Permeable barriers that block debris and filter water before it flows into the street/City storm drain system. | Lightly-soiled pedestrian areas and building exteriors | Compost- and gravel-filled bags or socks (Filtrexx EnviroSoxx*, Ultragravel Bags*) Geotextile fabric (curb inlet guard) |
| Collection Devices | Assist in the collection of wash water. | Berms and Barriers | Vacuum berms, Scuppers (Hydrotek Scupper*) |

**Indicates items featured in the pressure washing training video.*

Local Retailers/Vendors

Local hardware stores carry some items. Statewide Safety Systems carries many of the product types listed above. Online retailers are another source of supplies.
